Name: Abhijeet Ambekar.

Email address: aambekar234@gmail.com

Website: www.aambekar.com

Where to find solution and files

1. Github - https://github.com/aambekar234/wellspring_exercise
2. Hosted on - http://wellspring.aambekar.com
3. Also, I am submitting the files through email.

Instructions

1. Place the files in the working directory of apache server (LAMP Stack).

Features implemented in the solution

1. CSV file data parsing and showing unique valid data.
2. Upload CSV file and parse the new data.
3. Add new row dynamically.
4. Remove rows dynamically.
5. Added Pagination for showing 5 elements.
6. Sorting of data by clicking on the headers of the table.
7. Hosted on personal server.

Frameworks used in the solution

1. Bootstrap for UI purpose.
2. Datatables JavaScript library for showing data in tabular form and to add some functionality.
3. PHP for processing data at Backend.
